Groene Boekje en de PTT

L.S.

Tot recent geleden had ik geen exemplaar van het Groene Boekje. Ik was niet zo geïnteresseerd in de Nederlandse spellingspolitie.

Edoch, ik heb ergens een 2e-hands exemplaar gekocht.

Het eerste 'woord' in het Groene Boekje:

06-nummer

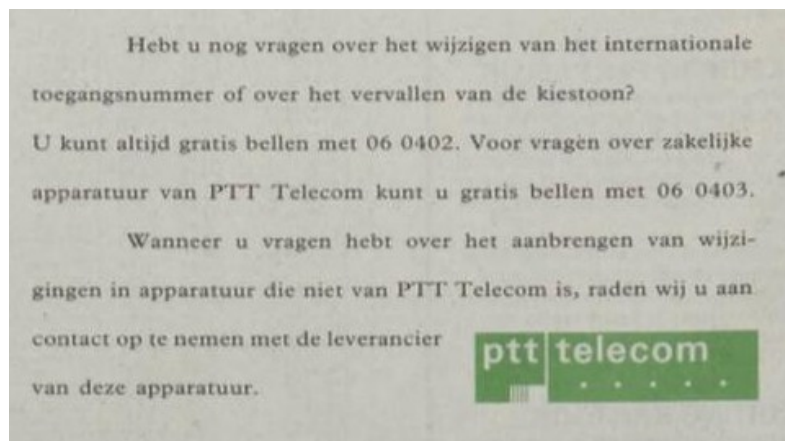

Het laatste woord:

Zwolse

Men kan natuurlijk filosoferen waarom een paradoxaal woord als "06-nummer" als eerste opgenomen is het het Groene Boekje.

Als '06-nummer' een woord is, is "06" dan ook een woord en "nummer" een getal of en speciaal woord, een nummerwoord cq nimmer een woord?

Toen PTT Telecom het 06-nummer introduceerde voor mobiele telefonie had PTT Telecom een groen logo¹.

Demystifying Telephone Service Codes: A Deep Dive into *69 and Beyond - 33rd Square

by Kara Masterson

7–9 minutes

Hey friend! Have you ever returned a call from a mysterious missed call using *69*? Or perhaps you've masked your own caller ID before making a prank call back in your mischievous younger days? Telephone service codes like 69 allow us to control and manipulate our calling experiences in intriguing ways. As a fellow tech enthusiast, I wanted to provide the inside scoop on these little-known dialing codes and how they work. Read on to learn the secrets of 69, 67, *82 and more!

Origins of the *69 Call Return Service

Before we dive in, let's briefly travel back in time. The ability to redial previous calls has been technically feasible since early Automatic Number Identification (ANI) systems emerged in the 1960s. This allowed the phone network to capture and retrieve the number of the last incoming call to your phone.

However, it took until 1968 for the first public Call Return service to launch in Pennsylvania, activated by dialing 69. *Over the next decade, Call Return spread across various telephone networks in the US and Canada. By the 1980s, 69 was widely available nationwide.*

Now let's fast forward to today and talk specifics. When you dial *69, here is what technically happens:

- Your phone system sends a signaling request containing your phone number to the telephone switch.
- The switch dips into the Signaling System 7 (SS7) or Advanced Intelligent Network (AIN) database to lookup the last missed call to your number.
- The caller's phone number and call details are retrieved from the database.
- An audio recording plays the phone number over your line and offers to return the call.

Pretty nifty for 1960s era technology! This signaling "memory" of the last missed call to your number makes the *69 service possible.

Common Reasons People Use *69

While we techies may be fascinated by the technical details, why do everyday people use *69*? Here are some of the most common scenarios where *69* comes in handy:

- You missed an important call and need to phone back urgently.
- You want to screen a call from an unfamiliar number before calling back.
- You need to retrieve a number you didn't have time to note down.
- To confirm the source of prank or threatening calls for reporting.
- To quickly return calls while driving or otherwise on the go.

I polled my readers about their *69* usage and 89% said they had used *69* to identify and return calls from unknown numbers. 67% have used it to swiftly call back a missed appointment or other time sensitive call.

So while the specifics of Signaling System 7 databases may interest only serious telecom geeks like yours truly, *69 meets some very common real-world communication needs for many people. It delivers value into the 21st century despite being conceived back when rotary phones still ruled.

Limitations and Quirks of *69

However, *69 isn't magic. There are some limitations and quirks to be aware of:

- No caller ID, no *69 – It won't work if incoming call was blocked or anonymous.
- Strictly retro, not prospective – Only retrieves the latest missed call, not older ones.
- Not 100% reliable on cellular networks – Your carrier may not fully support it.
- Potential per-call charges – Up to 50 cents a pop on some old landline networks.
- No substitute for full call logs – Smartphone logs provide a much richer call history.
- Doesn't work for voicemails or call forwarded calls – Since you didn't technically miss those calls directly.

So while *69 is handy for quick missed call returns, don't expect it to be your complete call management solution. Think of it as sprinkles on a cupcake, not the whole dessert cart!

The Double-Edged Sword of Caller ID Manipulation

Beyond just *69 call returns, there are a number of other codes that let us control caller ID display and blocking. For example:

- *67 blocks your number from showing up on the receiving end
- *82 unblocks your number and overrides any blocking

- *57 traces harassing calls
- *77 blocks anonymous callers from reaching you

This kind of caller ID control is a double-edged sword. I certainly understand the appeal – we all need privacy or want to avoid disruptive calls sometimes. However, routinely blocking your identity promotes unaccountability and mistrust.

The ethical approach is to:

- Avoid making blocked calls except when truly needed.
- Inform recipients in advance you'll be blocking for legitimate privacy reasons.
- If you must block temporarily, leave a voicemail with your details.
- Never block your identity for harmful purposes like harassment or threats.
- Respect others' wish to block their number by not overriding it.
- Only trace callers in cases of serious harassment or threats.

As in life, moderate use of these services balanced with transparency is the wise path. And if you're dealing with serious criminal threats, get law enforcement involved rather than taking matters into your own hands.

Okay, public service announcement over! Now, let's return to fun tech topics and explore some more obscure calling codes...

Bonus Round – A Telco Geek's Favorite Dialing Codes

Beyond the common *69* and *67* codes, there's a whole world of lesser known dialing codes for those want to truly master phone system hacking! Here are some of my favorites:

##4636## – This code opens the Android "Testing" menu chock full of hidden tools to test device functions.

#21# – Checks if call forwarding is enabled on your phone line. Returns status confirmation.

***43** – Activates call waiting by dialing this code before making a call. Ensures you can receive other calls if busy.

***87** – Deactivates call waiting for the next call only. Useful when you really don't want to be interrupted!

***78** – Enables do not disturb by sending all calls straight to voicemail. Great for those times you need some peace and quiet.

004 – Get your own phone number by dialing this code! Useful if you forgot your number.

Want even more esoteric calling codes? I keep a running list [on my tech blog](#) for fellow mobile hackers and tinkerers. Check it out for codes to override carrier settings, troubleshoot mobile service and more.

While I wouldn't recommend casual phone users memorize these codes, they demonstrate just how intelligent and hackable our phone networks really are below the surface. Telecom systems have many hidden backdoors if you know the secrets!

SMS vast

3-4 minutes

Sms is niet alleen meer voorbehouden aan mobiele telefoons. Vanaf 10 maart 2003 is het in heel Nederland mogelijk sms-berichten te sturen van en naar vaste telefoons. In Groningen was dat al als test vanaf december mogelijk. KPN biedt het nu ook landelijk aan.

Hoe verzend je een sms vanaf een vaste telefoon?

Het versturen van sms'jes vanaf een vaste telefoon is aan nogal wat voorwaarden gebonden. Zo moet bijvoorbeeld nummerweergave aanstaan (en dat kost tegenwoordig geld) en je moet via de KPN bellen en niet via een carrier select. Belangrijker is echter dat het aantal toestellen dat het verzenden van sms ondersteund voorlopig nog beperkt is. De geschikte toestellen van KPN in de Primafoonwinkels zijn: Chicago 440/450 Comfort en 450 Micro. Daarnaast worden bijvoorbeeld door [Topcom](#) een aantal toestellen aangeboden. Het verzenden van sms'jes via een vast toestel kost 22 eurocent per stuk. Voorlopig is het nog niet mogelijk via een vaste telefoon sms'jes te sturen aan mobiele en vaste nummers bij andere operators dan KPN Telecom. Ook aan speciale telefoonnummers (bijv. 0900, 112) kan je geen sms'jes sturen. Aan sms-spelletjes deelnemen met je vaste telefoon is dus niet mogelijk. Heb je een geheim nummer, let dan op: ook al heb je een geheim nummer of blokkeer je nummerweergave, dan wordt je telefoonnummer toch meegezonden met een sms. Dit heeft de KPN zo ingesteld om misbruik te voorkomen.

Hoe ontvang je sms op een vast toestel?

Ontvangen van sms kan wel iedereen. Hier zijn voor de ontvanger geen kosten aan verbonden. Als het toestel niet geschikt is om tekstberichten in een display te tonen wordt het bericht namelijk voorgelezen. Dit gebeurt door een computer met spraaktechnologie. Hier zit wel een klein nadeel aan. De computer gaat ervan uit dat alle sms'jes in het Nederlands zijn opgesteld. Een Engelstalig berichtje zal dus heel vreemd klinken. Als je een sms op een vast toestel ontvangt kan het natuurlijk voorkomen dat je niet thuisbent. Als het bericht niet kan worden ingesproken op een antwoordapparaat of op VoiceMail zal de KPN gedurende ♦♦n dag blijven proberen verbinding te krijgen. Lukt dit niet, dan zal het sms'je zijn doel niet bereiken. De KPN waakt goed over onze nachtrust. Gesproken berichten worden tussen 23:30 en 8:30 niet afgeleverd. Bij tekstberichten is dit wel het geval.

Van mobiel naar vast

Een sms'je sturen vanaf een mobiel naar een vast toestel kan iedereen met uitzondering van Dutchtone-klanten. Dutchtone weigert namelijk hieraan mee te werken. Volgens dit telecombedrijf houdt KPN Telecom zich niet aan internationaal geldende technische

afspraken en vraagt het te veel geld voor de sms-berichten. Omdat slechts weinigen momenteel beschikken over een vast toestel wat geschikt is om sms te versturen lijkt de mogelijkheid om via een vast toestel sms'jes te ontvangen die verstuurd zijn vanaf een mobieltje voorlopig het meest interessant. De prijs van 22 cent lijkt daarbij geen probleem, de kosten zijn ook nooit een belemmering gebleken bij sms tussen mobiele telefoons.
